

The Greens are facing up to climate change with the Safe Climate Bill.

How will you face up?

It's time to put your face directly in front of the Prime Minister and your local MP.

Go to www.FaceUp.org.au

Upload your photo to tell Kevin Rudd and his MPs that they work for you, not the big polluters, and you've given him a mandate to actually tackle the climate crisis, not lock in failure.

For information about all Greens campaigns around the country, visit www.Greens.org.au

"Our goal is not simply to reduce carbon emissions.

"Our real goal must be to pass on to our children and their children the safe climate that has nurtured us and made human civilisation possible."

*- Australian Greens Deputy Leader
Senator Christine Milne*

SAFECLIMATEBILL

The Greens have
a vision for a
safe climate

www.safeclimatebill.org.au

The Greens' Safe Climate Bill is the first legislative solution that would truly protect Australia's climate

The Rudd Government's plan locks in failure on the climate crisis by sidelining the science and handing \$16 billion to polluters.

The Greens' Safe Climate Bill protects people, jobs and the planet - it's that simple!

Australian Greens Leader Bob Brown & Deputy Leader Christine Milne

A safe climate is EASI:

- the Greens' Energy Efficiency Access and Savings Initiative (EASI) scheme will invest in upgrading all of Australia's 8 million homes for energy efficiency;
- the Greens will legislate to increase energy efficiency in Australia's commercial buildings, and;
- provide incentives for Australia's heavy industry to implement efficiency upgrades.

A real ETS targetting emissions reductions of 40% below 1990 levels by 2020

- Cutting emissions to 40% below 1990 levels by 2020, and;
- Investing in helping Australians cut their emissions, not sandbagging polluters.

Transport for Australians without changing the climate:

- the Greens will cut the current GST charge on public transport tickets, making it easier and cheaper to get around;
- increase funding for buses, trains, trams and cycleways, and;
- fund an east coast very fast train, instead of more tollways and freeways.

A Green Carbon plan:

- will protect our native forest carbon stores;
- will support those working on the land to be part of the global effort to reduce emissions.

5 steps to success

The Safe Climate Bill is a collection of linked bills based around five pillars:

- **renewable energy**
- **energy efficiency**
- **clean transport**
- **forest protection**
- **making polluters pay**

A 100% renewable energy vision:

- boosting the **renewable energy target**;
- introducing a national gross **feed-in tariff** for all forms of renewable energy;
- setting up a **Sun Fund** to drive renewable energy research & development from innovation to installation;
- **Farming Renewable Energy**;
- investing in a broad-scale roll-out of **intelligent grid technology** so Australia can become 100% renewably powered.
